Contents

Foreword 1

Chapter 1. Introduction 3

1.1. Motivation 3
1.2. Networks 3
1.3. Traffic 5
1.4. Queues 6
1.5. Structure of the book 6
1.6. Bibliography 7

Chapter 2. Exponential distribution 9

2.1. Definition 9
2.2. Discrete analogue 10
2.3. An amnesic distribution 11
2.4. Minimum of exponential variables 12
2.5. Sum of exponential variables 14
2.6. Random sum of exponential variables 14
2.7. A limiting distribution 15
2.8. A “very” random variable 15
2.9. Exercises 17
2.10. Solution to the exercises 18

Chapter 3. Poisson processes 21

3.1. Definition 21
3.2. Discrete analogue 22

3.3. An amnesic process 24
3.4. Distribution of the points of a Poisson process 24
3.5. Superposition of Poisson processes 24
3.6. Subdivision of a Poisson process 25
3.7. A limiting process 26
3.8. A "very" random process 26
3.9. Exercises 27
3.10. Solution to the exercises 28

Chapter 4. Markov chains 31

4.1. Definition 31
4.2. Transition probabilities 32
4.3. Periodicity 32
4.4. Balance equations 33
4.5. Stationary measure 33
4.6. Stability, ergodicity 34
4.7. Finite state space 35
4.8. Recurrence, transience 35
4.9. Frequency of transition 36
4.10. Formula of conditional transitions 37
4.11. Chain in reverse time 37
4.12. Reversibility 38
4.13. Kolmogorov's criterion 39
4.14. Truncation of a Markov chain 41
4.15. Random walk 42
4.16. Exercises 43
4.17. Solution to the exercises 44

Chapter 5. Markov processes 49

5.1. Definition 49
5.2. Transition rates 49
5.3. Discrete analogue 50
5.4. Balance equations 51
5.5. Stationary measure 52
5.6. Stability, ergodicity 52
5.7. Recurrence, transience 53
5.8. Frequency of transition 53
5.9. Virtual transitions 54
5.10. Embedded chain 56
5.11. Formula of conditional transitions 57
5.12. Process in reverse time 57
5.13. Reversibility 58
5.14. Kolmogorov's criterion 59

5.15. Truncation of a reversible process 60
5.16. Product of independent Markov processes 60
5.17. Birth-death processes 61
5.18. Exercises 62
5.19. Solution to the exercises 64

Chapter 6. Queues 71

6.1. Kendall's notation 71
6.2. Traffic and load 72
6.3. Service discipline 73
6.4. Basic queues 74
6.5. A general queue 79
6.6. Little's formula 81
6.7. PASTA property 82
6.8. Insensitivity 83
6.9. Pollaczek-Khinchin's formula 83
6.10. The observer paradox 86
6.11. Exercises 88
6.12. Solution to the exercises 90

Chapter 7. Queuing networks 97

7.1. Jackson networks 97
7.2. Traffic equations 99
7.3. Stationary distribution 101
7.4. MUSTA property 102
7.5. Closed networks 102
7.6. Whittle networks 104
7.7. Kelly networks 105
7.8. Exercises 106
7.9. Solution to the exercises 108

Chapter 8. Circuit traffic 113

8.1. Erlang's model 113
8.2. Erlang's formula 114
8.3. Engset's formula 116
8.4. Erlang's waiting formula 119
8.5. The multi-class Erlang model 121
8.6. Kaufman-Roberts' formula 124
8.7. Network models 125
8.8. Decoupling approximation 126
8.9. Exercises 127
8.10. Solutions to the exercises 129

Chapter 9. Real-time traffic 135

9.1. Flows and packets 135
9.2. Packet level model 136
9.3. Flow level model 138
9.4. Congestion rate 139
9.5. Mean throughput 140
9.6. Loss rate 141
9.7. Multi-rate model 142
9.8. Recursive formula 144
9.9. Network models 145
9.10. Gaussian approximation 146
9.11. Exercises 147
9.12. Solution to the exercises 149

Chapter 10. Elastic traffic 155

10.1. Bandwidth sharing 155
10.2. Congestion rate 157
10.3. Mean throughput 158
10.4. Loss rate 159
10.5. Multi-rate model 161
10.6. Recursive formula 163
10.7. Network model 165
10.8. Exercises 166
10.9. Solution to the exercises 168

Chapter 11. Network performance 173

11.1. IP access networks 173
11.2. 2G mobile networks 176
11.3. 3G mobile networks 179
11.4. 3G+ mobile networks 182
11.5. WiFi access networks 184
11.6. Data centers 189
11.7. Cloud computing 191
11.8. Exercises 192
11.9. Solution to the exercises 195
